```java
public Map<String, Object> getTradeStatus(long tid) {
    Map<String, Object> result = new HashMap<String, Object>(0);
    try {
        // TODO 是否改为TradeSoldGetRequest接口更可靠, 可以获得discount_fee
        TradeGetRequest req = new TradeGetRequest();
        req.setFields("status,end_time,total_fee,discount_fee,post_fee,
        req.setTid(tid);
        TradeGetResponse response = ((DefaultTaobaoClient) getClient())
        Trade trade = response.getTrade();
        if (trade == null) {
            return result;
        }

        result.put("status", trade.getStatus());
        result.put("endTime", trade.getEndTime());
        result.put("totalFee", trade.getTotalFee());
        result.put("discountFee", trade.getDiscountFee());
        result.put("postFee", trade.getPostFee());
        result.put("payment", trade.getPayment());
        // return result;

    } catch (ApiException ex) {
        ex.printStackTrace();
    }
```
